Code Challenge Description

- Create a view from the attached PSD using HTML, CSS, and JavaScript. The site should be **fluidly responsive** with breakpoints at your discretion. (Using a responsive framework is encouraged.)

- The max site width is defined by the PSD. When over max width the content should be centered in the browser.

- Use best judgement on the nature and design of the navigation when the site collapses responsively.

- Spacing and font changes can change based on your interpretation.

- Use best judgement for order and placement of page elements when site collapses.

- All files used should be enclosed in zip file so they can be extracted and viewed locally on any web browser.
